

UF-RANGE

UF-range

Indoor Dust suppression, Humidification and Cooling

The UF-range (ultra fine mist) is suitable for indoor dust suppression, humidification and cooling. The UF-range can fight extremely small dust particles and the water consumption is minimal. It works with highly pressurised water (50-100 bar) which is by far the most cost effective method of achieving air humidification.

The UF-range generates a water mist with droplet sizes 1-20 microns with a mean droplet size of 5-10 microns depending on choice of nozzles. (Ultra fine droplets).

Droplet size: 1-20 microns
Mean droplet size: 5-10 microns
